What Is Forex Trading?

WHAT IS FOREX TRADING? It's the discipline of exchanging international currencies, which are traded against one another in pairs. Transactions take place in the forex (also known as foreign exchange or FX) market. When you travel abroad and swap currency for local use, you're already participating in the global forex market. But did you know that the foreign currency market trades a daily volume of more than \$5.1 trillion? Maybe you are wondering what concepts you need to learn to trade FX like a pro. We've got your back! By the end of this guide, you will have a better understanding of the forex basics and the ability to read forex charts.

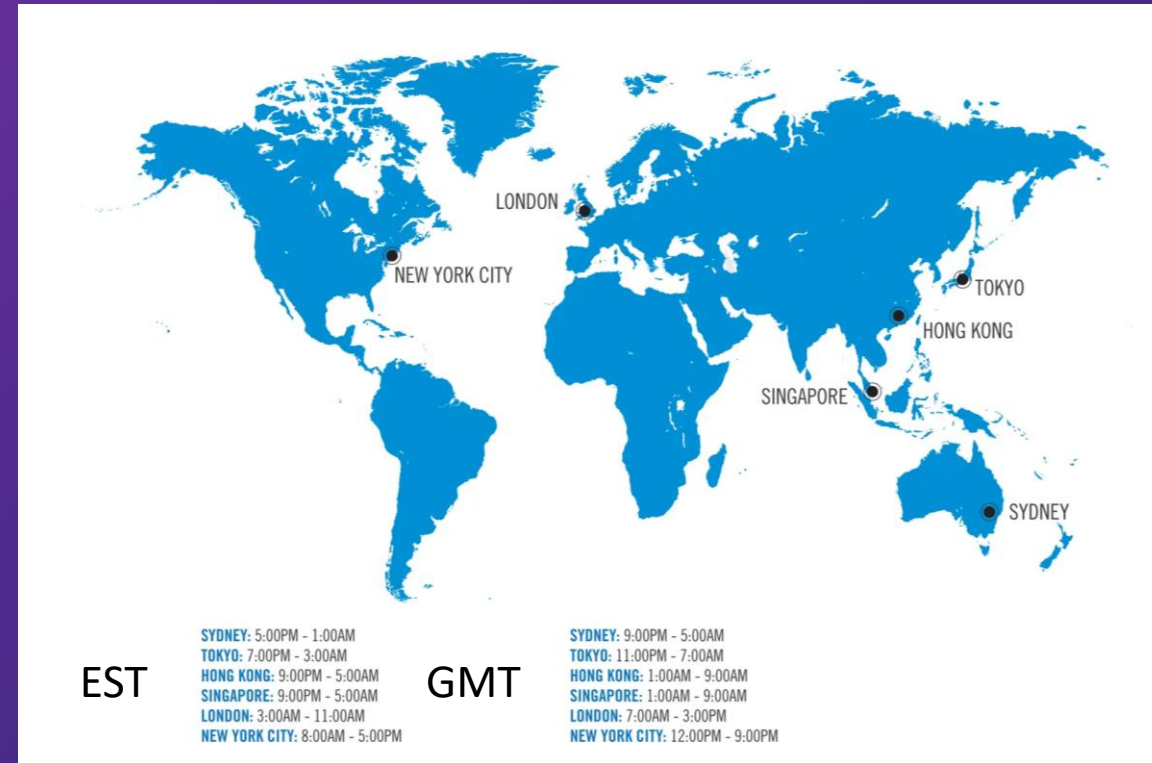

Why Forex Trading?

The Forex market is where traders from around the world can trade the currencies of global countries (or in a union of countries, as in Europe). The Forex market is the largest financial market in the world, with an estimated \$4 trillion transacted daily. That's 160 times the volume of the New York Stock Exchange.

(Source: Bank of International Settlements Triennial FX Report, 2007)

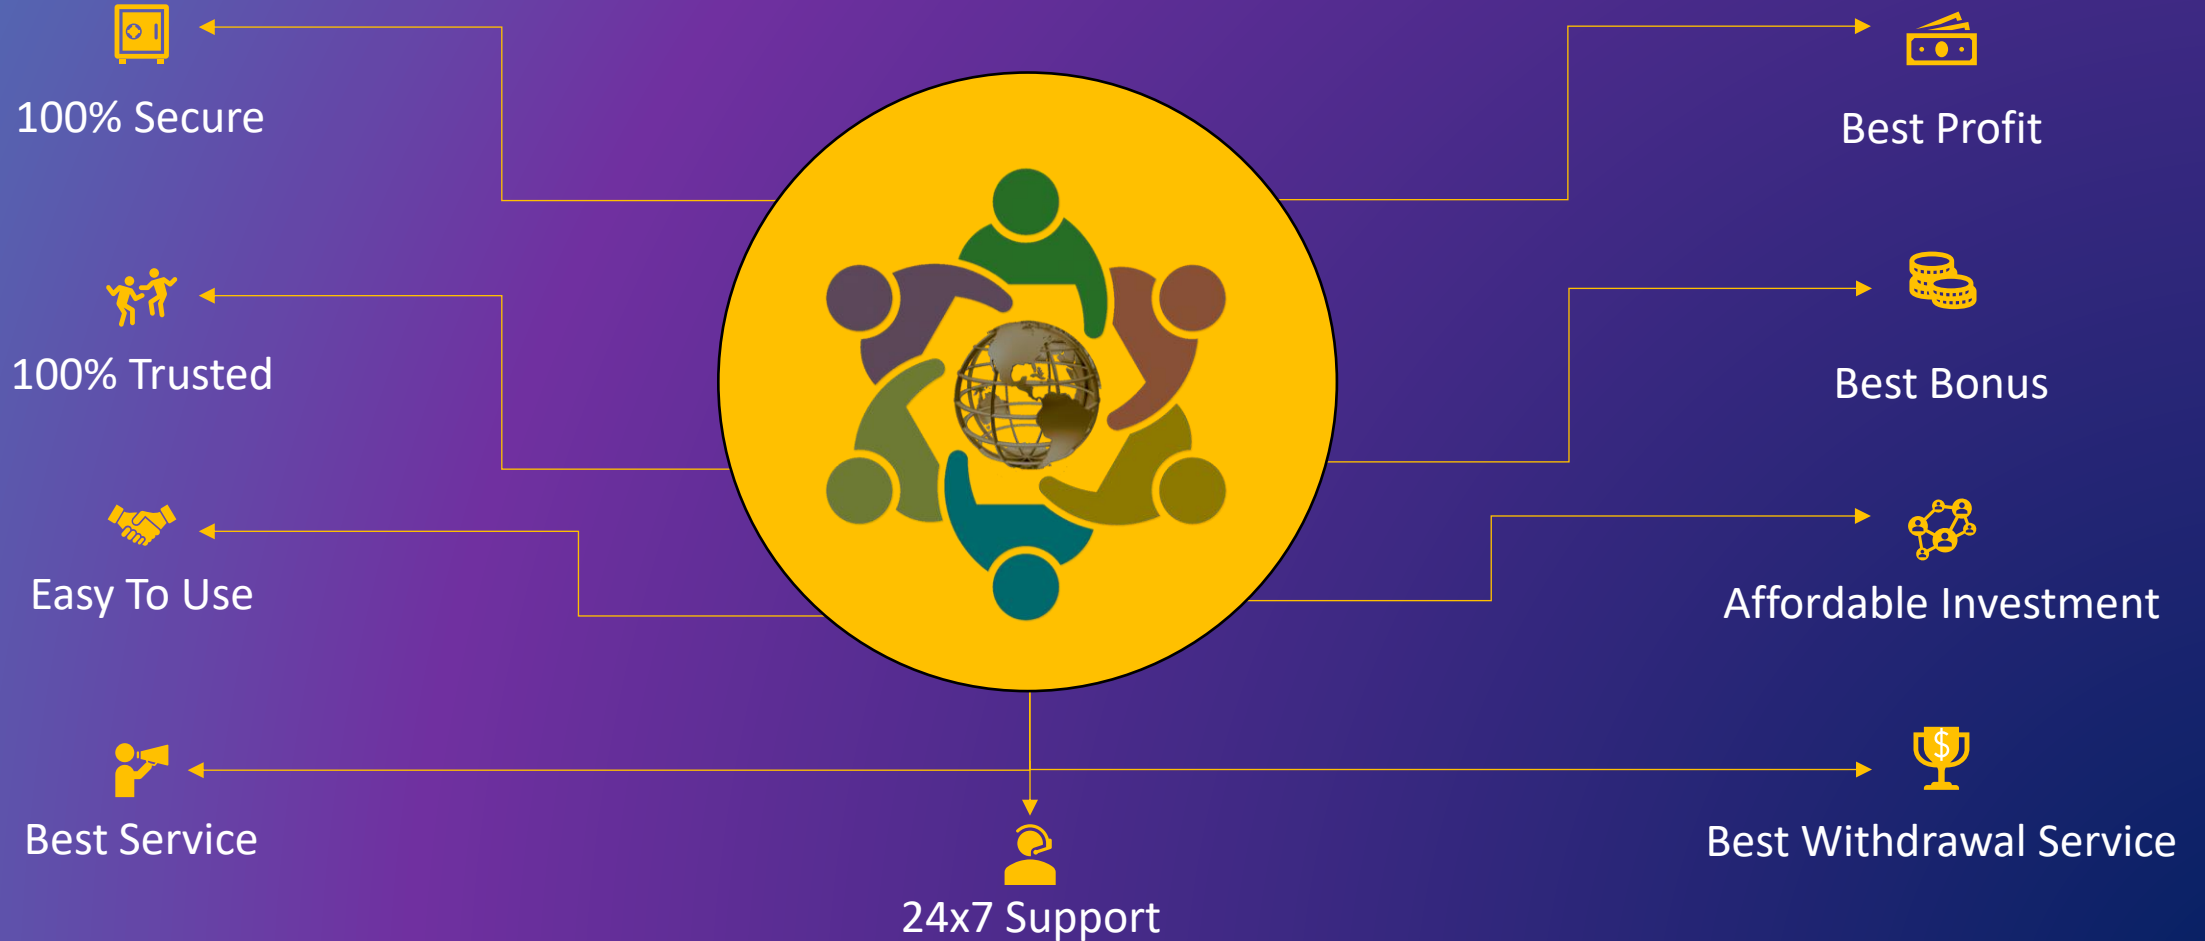

To get a sense of just how large this market is, consider that the amount traded in four days could pay off the entire United States debt.

Not only does Forex offer the benefit of being the largest market in the world, through trading currencies, it is naturally also the most liquid market available.

Forex is a seamless, decentralized 24-hour market that follows global banking activity from one international market to another. Unlike in other markets, Forex traders can trade 24 hours a day, from Sunday through Friday.
